

# 1. Assignment

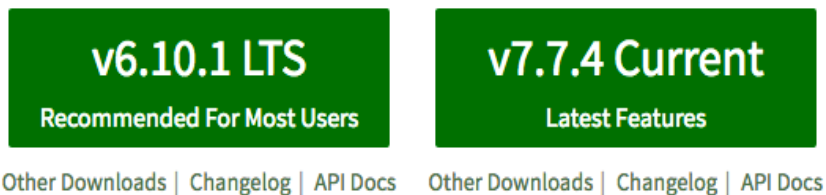

## 1. Install Node JS

Now, let's go to:

<https://nodejs.org>

Download the latest version of **Node.js** and install it!

Download for macOS (x64)

Or have a look at the [LTS schedule](#).

After installed, open your CLI (**Terminal** , **CMD** or **Git Bash**) and run this command to check what version of **Node.js** and **npm** you're using:

**for node.js**

```
Command Prompt
C:\Users\admin>node --version
v7.10.0
```

**For npm**

```
C:\Users\admin>npm -v
4.2.0
C:\Users\admin>npm --version
4.2.0
C:\Users\admin>
```

Usually, when you install **Node.js**, **npm** is automatically installed for you.

If you want, you can install **npm** manually or **upgrade to the newest version** of **npm** by running this command:

```
C:\Users\admin>npm install npm -g
```

We should now have **npm** installed!
